MM74C221 Dual Monostable Multivibrator

General Description

The MM74C221 dual monostable multivibrator is a monolithic complementary MOS integrated circuit. Each multivibrator features a negative-transition-triggered input and a positive-transition-triggered input, either of which can be used as an inhibit input, and a clear input.

Once fired, the output pulses are independent of further transitions of the A and B inputs and are a function of the external timing components C_{EXT} and R_{EXT} . The pulse width is stable over a wide range of temperature and V_{CC} .

Pulse stability will be limited by the accuracy of external timing components. The pulse width is approximately defined by the relationship $t_{W(OUT)}\approx C_{EXT}\ R_{EXT}$. For further information and applications, see AN-138.

Features

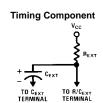

- Wide supply voltage range: 4.5V to 15V
- Guaranteed noise margin: 1.0V
- High noise immunity: 0.45 V_{CC} (typ.)
- Low power TTL compatibility: fan out of 2 driving 74L

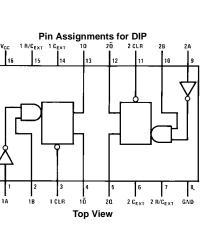

MM74C221 Dual Monostable Multivibrator

Ordering Code:

Order Number	Order Number Package Number	er Package Description			
74MMC221N	N16E	16-Lead Plastic Dual-in-Line Package (PDIP), JEDEC MS-001, 0.300" Wide			

Connection Diagrams

Truth Table

1	nputs		Out	puts
Clear	Α	В	Q	Q
L	Х	Х	L	Н
Х	Н	Х	L	Н
Х	Х	L	L	Н
Н	L	↑	л	Ъ
Н	\downarrow	Н	л	ъ

H = HIGH Level ___ = One HIGH level pulse

L = LOW Level ⊐_ = One LOW level pulse ↑ = Transition from LOW-to-HIGH X= Irrelevant

↑ = Transition from LOW-to-HIGH \downarrow = Transition from HIGH-to-LOW

Absolute Maximum Ratings(Note 1)

Voltage at Any Pin	–0.3V to V _{CC} + 0.3V
Operating Temperature Range	$-40^{\circ}C$ to $+85^{\circ}C$
Storage Temperature Range	$-65^{\circ}C$ to $+150^{\circ}C$
Power Dissipation	
Dual-In-Line	700 mW
Small Outline	500 mW
Operating V _{CC} Range	4.5V to 15V

Absolute Maximum V _{CC}	18V
$R_{EXT} \ge 80 V_{CC} (\Omega)$	
Lead Temperature	
(Soldering, 10 seconds)	260°C

18V

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The Electrical Characteristics table provides conditions for actual device operation.

DC Electrical Characteristics

		Any Other Input (Note 6)		5		pF

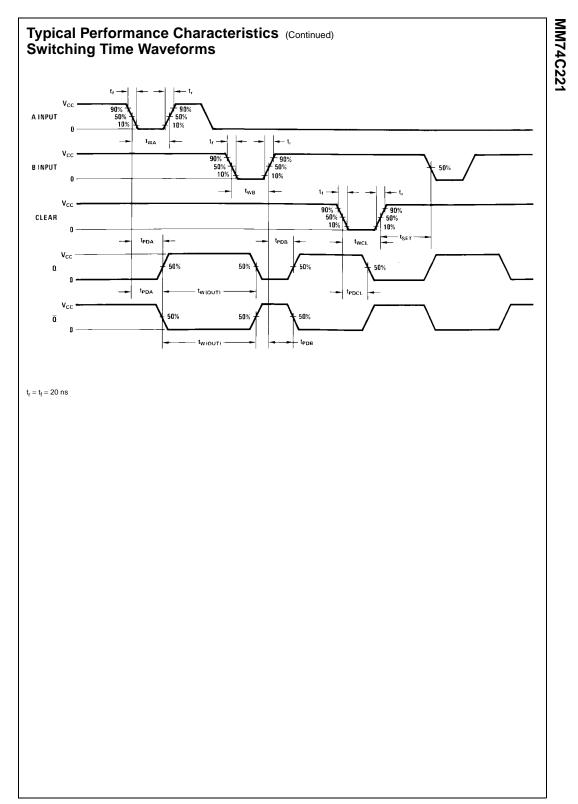

Note 3: AC Parameters are guaranteed by DC correlated testing.

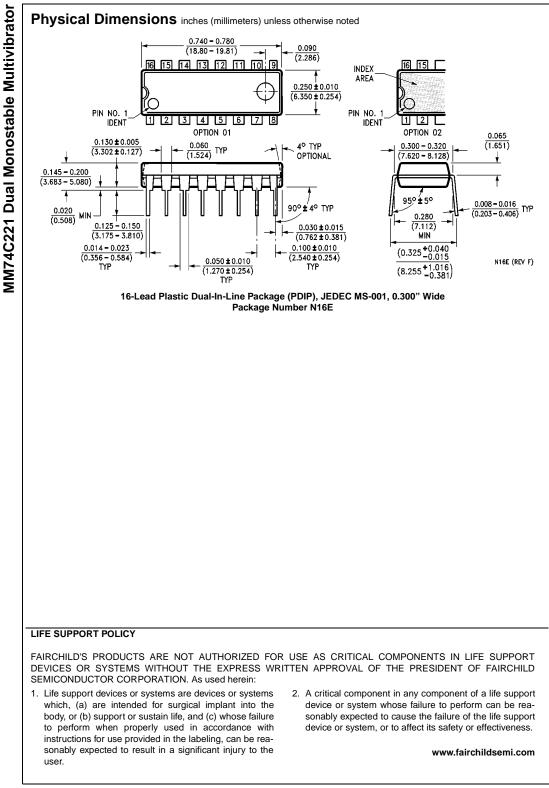

Note 4: See AN-138 for detailed explanation $\ensuremath{\mathsf{R}_{\text{ON}}}$.

Note 5: Maximum output duty cycle = R_{EXT}/R_{EXT} + 1000.

Note 6: Capacitance is guaranteed by periodic testing.
